GET 1st DRAWING SHEET OF 5

Oct. 19, 1999

System for coupling programmable logic device to external circuitry which selects a logic standard and uses buffers to modify output and input signals accordingly

REISSUE:

Reissue Application filed Oct. 19, 2001 (O.G. May 21, 2002) Ex. Gp.: 2782; Re. S.N. 10/084,757

INVENTOR:

Tran, Nghia, San Jose, California Li, Ying Xuan, Santa Clara, California Balicki, Janusz, San Jose, California Costello, John, San Jose, California

ASSIGNEE-AT-ISSUE:

Altera Corporation, San Jose, California (02)

- STG (A) United States patent
- AB A programmable input/output device for use with a programmable logic device (PLD) is presented comprising an input buffer, an output buffer and programmable elements. The programmable elements may be programmed to select a logic standard for the input/output device to operate at. For instance, a given set of Select Bits applied to the programmable elements may select TTL logic, in which case the input and output buffers would operate according to the voltage levels appropriate for TTL logic (e.g., 0.4 volts to 2.4 volts). For a different set of Select Bits, the GTL logic standard would be applied (e.g., 0.8 volts to 1.2 volts). The invention enables a single PLD to be used in conjunction with various types of external circuitry.
